

# ACOUSTIC LEAVES

A signature feature on every Treedom Tree, our acoustic leaves are designed to soften sound while creating a calming visual statement.

Made from high-performance acoustic felt, they help absorb unwanted noise and reduce reverberation. Making learning spaces and working environments feel quieter and calmer.

## WHY ACOUSTICS?

Reducing reverberation around the large open spaces, improving speech clarity and concentration.

More than just a feature, Treedom brings the calming presence of trees indoors.

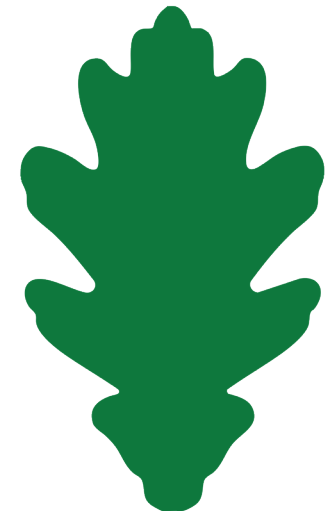

Every tree is manufactured to order, custom your leaf shape, custom colours also available.

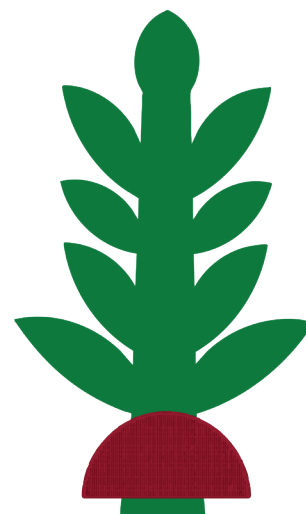

Ideal for open spaces to create quieter zones in ILE areas, libraries, and collaboration spaces.
